Math and Science

Math: This week we will divide a set of objects by sharing and having "remainders", estimate capacity, take our written assessment 2!, introduce a few of our last addition facts, and identify geometric solids (cone and sphere)

Science: We are doing really cool things in science! Has your child told you about planting bean seeds? We will try to continue adding some green to our school property by planting a tree! We will try to understand why Spring is a good time to plant and what the seasonal life cycle is.
